APPENDIX P – LINSIG OUTPUT REPORT
APPENDIX Q – PICADY OUTPUT REPORT

1 INTRODUCTION

- 1.1 This Transport Assessment has been prepared by RPS on behalf of Cenin to support Pre-Application Consultation (PAC) for an outline planning application with all matters reserved for the construction of an employment unit (Use Class B1, B2 or B8), with indicative access and circulation, hard and soft landscaping and drainage infrastructure.
- 1.2 The planning application will seek outline planning permission with all matters reserved.

Background

- 1.3 The site is located to the west of the Welcome Break Sarn Park Services and is bound by the A4063 to the north, the M4 to the south, an unnamed local access road which becomes a footbridge crossing over the M4 to the east, and a railway line (the Maesteg Line) to the west. Sarn is located further north of the site beyond the A4063. The site is undeveloped and measures approximately 10.3 acres, with no current vehicular access.
- 1.4 Within the Bridgend County Borough Council (BCBC) Local Development Plan 2018-2033 the proposed site is allocated as a site for Employment Allocation (ENT1(15)) and (ENT2(29)). Appendix 5 of the Local Development Plan 2018-2033 is an Implementation and Delivery Appendix which sets out key issues, constraints, phasing and mitigation measures for allocated sites. In regard to ENT1(15) it is stated that there are “No known issues / constraints” in relation to Highways and Transport.

Development Proposals

- 1.5 An illustrative concept site plan is attached at **Appendix A**. This illustrates a single linear building responding to the shape of the site. The building is set back from the ancient woodland, providing an offset. A new access junction could be provided from the A4063 ramping down to a loop road wrapping around the building and allowing for circulation. The existing watercourse running through the site could be diverted, with a basin to the west of the site and surface water attenuation underneath the parking. New banks and ground levelling works are proposed to tie back into the existing.
- 1.6 The concept site plan shows a three-storey building with a double shallow pitch roof and a parapet. It responds to the levels of the site, with entrances at ground and lower ground level.
- 1.7 The approximate gross internal floor area for the building is 32,000m², with the following internal gross floor areas for the three storeys;
- Lower ground floor: c. 6,000m²
 - Ground floor: c. 13,000m².
 - First floor: c. 13,000m²

Content of Transport Assessment Report

- 1.8 This Transport Assessment has been prepared in accordance with the Welsh Government publication Technical Advice Note (TAN) 18: Transport (TAN18), 2007, and addresses the transportation and highways issues associated with the proposed development.
- 1.9 The following transportation and highway issues are addressed in detail in this Transport Assessment:
- Relevant National and Local transport policy;
 - Existing and baseline transport conditions;
 - Details of the proposed development;
 - Development travel demand;
 - Transport Impact on the local highway network;
 - Transport Implementation Strategy; and
 - Summary and conclusion on the Transport Assessment.

Conclusions

- 1.10 This Transport Assessment concludes that sustainable access could be provided to the proposed development and generated traffic flows could be accommodated without the detriment to the existing safety or operation of the local highway network. A Framework Travel Plan (FTP) will be prepared and then implemented site-wide which will encourage sustainable travel to and from the development.
- 1.11 It is concluded that there are no transportation reasons why the development proposal should not be allowed.

2 POLICY REVIEW

Introduction

2.1 The development proposals will be considered against the following transport policies and guidance:

- Planning Policy Wales (PPW) Edition 12 (2024)
- Technical Advice note (TAN) 18: Transport (2007)
- Llwybr Newydd: The Wales Transport Strategy 2021 (2021)
- Future Wales – The National Plan 2040
- Sustainable Development Scheme ‘One Wales: One Planet’ (2009)
- Active Travel (Wales) Act (2013)
- Active Travel Act Guidance – July 2021;
- Wellbeing of Future Generations (Wales) Act 2015;
- The Future Generations Report 2020;
- Bridgend Local Development Plan 2018-2033 (2024)
- Local Transport Plan 2015-2023 (2015)
- Supplementary Planning Guidance 17 – Parking Standards (2008)

National Policy

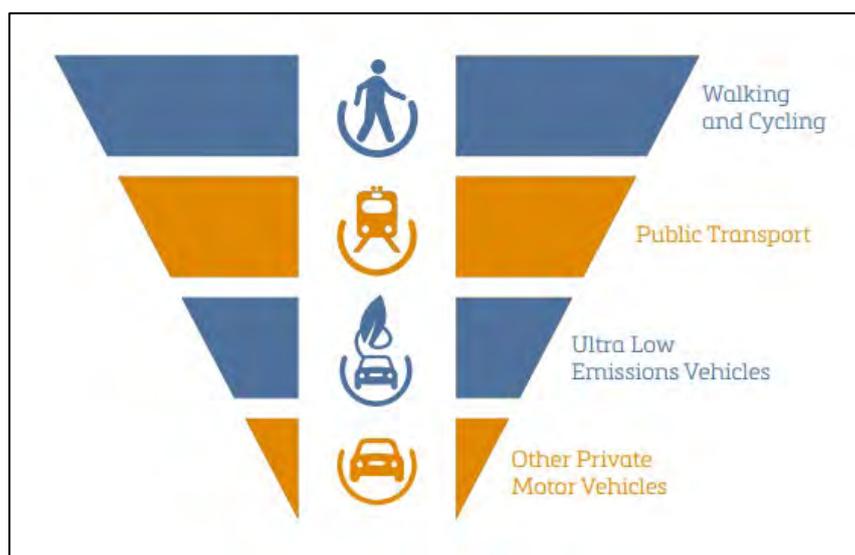

Planning Policy Wales Edition 12 (2024)

2.2 Planning Policy Wales (PPW) sets out the land use planning policies of the Welsh Government. It is supplemented by a series of Technical Advice Notes (TANs), Welsh Government Circulars and policy clarification letters, which together with PPW provide the national planning policy framework for Wales.

2.3 Chapter 4 of the policy sets out the future aims for transport. In brief developments should:

- Bring services to people to reduce the need to travel by planning for better physical and digital connectivity.
- Allow people and goods to move easily from door-to-door by accessible, sustainable and efficient transport.
- Where new transport infrastructure is required, priority will be given to walking, cycling and public transport ahead of private motor vehicles.
- Encourage people to make the change to sustainable transport to help meet climate change targets.

2.4 **Figure 9:** The Sustainable Transport Hierarchy for Planning within the Policy document shows the hierarchal approach to reduce vehicle trips and can be viewed below.

2.5 It is Welsh Government policy to require the use of a sustainable transport hierarchy in relation to new development, which priorities walking, cycling and public transport ahead of motor vehicles.

2.6 The sustainable transport hierarchy should be used to reduce the need to travel, prevent car-dependent developments in unsustainable locations, and support the delivery of schemes located, designed and supported by infrastructure which prioritises access and movement by active and sustainable transport.

Technical Advice Note TAN 18 (2007)

2.7 This Technical Advice Note details how to integrate land use and transport planning, explaining how transport impacts should be assessed and mitigated. The Assembly Government adopts a sustainable development approach, as stated within paragraph 2.2. This includes:

- “Integration of transport policy with policies for the environment, education, social justice, health, economic development and wealth creation.”

2.8 Paragraph 2.3 states that the sustainable policy objectives will be met through the integration of transport and land use by:

- “Ensuring new development is located where there is, or will be, good access by public transport, walking and cycling;
- Ensuring that new developments include appropriate provision for pedestrians, cycling, public transport, and traffic management and parking;
- Ensuring that transport infrastructure or service improvements necessary to serve new development allow existing transport networks to continue to perform their identified functions.”

2.9 Paragraph 3.7 states:

- “Development plans should seek wherever possible to identify locations ... which offer genuine and easy access by a range of transport modes and therefore:

- allocate major generators of travel demand ... near public transport interchanges, as a means to reduce car dependency and increase social inclusion by ensuring that development is accessible by public transport for those without access to a car;
- consider the potential for changing existing unsustainable travel patterns, for example through a co-ordinated approach to development plan allocations and transport improvements.”

2.10 Within paragraph 6.2 it is stated that developers should:

- ‘Ensure that new development encourages walking as a prime means for local journeys by giving careful consideration to location, access arrangements and design, including the siting of buildings close to the main footway, public transport stops and pedestrian desire lines.’

Llwybr Newydd: The Wales Transport Strategy 2021 (2021)

2.11 The Wales transport strategy sets out the vision for how the Welsh transport system can help deliver the priorities for Wales, helping to put Wales on a pathway to creating a more prosperous, green and equal society.

2.12 The transport strategy has the following three headline priorities;

- Priority 1: bring services to people in order to reduce the need to travel.
- Priority 2: allow people and goods to move easily from door to door by accessible sustainable and efficient transport services and infrastructure.
- Priority 3: encourage people to make the change to more sustainable transport.

Future Wales – The National Plan 2040

2.13 ‘Future Wales – The National Plan 2040’ (Future Wales) is the national development framework, setting the direction for development in Wales to 2040.

2.14 Future Wales recognises that Placemaking is at the heart of the planning system in Wales, and that this policy establishes a strategic placemaking approach and principles to support planning authorities to shape urban growth and regeneration.

2.15 Policy 2 of Future Wales is titled Shaping Urban Growth and Regeneration – Strategic Placemaking. It states that urban growth and regeneration should be based on several strategic placemaking principles including:

- **‘Building places at a walkable scale, with homes, local facilities and public transport within walking distance of each other;**
- **Increasing population density, with development built at urban densities that can support public transport and local facilities; and**
- **Establishing a permeable network of streets, with a hierarchy that informs the nature of development’.**

2.16 Of key importance to new developments such as the proposed site is the concept of the ‘walkable scale.’ This strategic placemaking principle states that to enable active and healthy lifestyles, people should be able to easily walk to local facilities and public transport.

Sustainable Development Scheme ‘One Wales: One Planet’ (2009)

- 2.17 The Sustainable Development Scheme of the Welsh Assembly Government titled ‘One Wales: One Planet’ (May 2009) has a main outcome of “a low carbon transport network which promotes access rather than mobility, so that we can enjoy facilities with much less need for single occupancy car travel”. Under the heading of ‘What a Sustainable Wales Would Look Like’ is:
- “Walking and cycling are much more commonplace. There is greatly enhanced provision for cyclists and pedestrians... with improved walking and cycling networks, as well as better street design and traffic management measures.
 - There is a coherent network of sustainable transport options within rural Wales.
 - Travel Plans are part of all new developments. All employers develop and implement Travel Plans.”

Active Travel (Wales) Act (2013)

- 2.18 This Act makes it a legal requirement for local authorities in Wales to map and plan suitable routes for active travel, and to build and improve their infrastructure for walking and cycling every year. It creates new duties for highway authorities to consider the needs of walkers and cyclists and make better provision for them. It also requires both the Welsh Government and local authorities to promote walking and cycling as a mode of transport.
- 2.19 By connecting key sites such as workplaces with active travel routes, the Act will encourage people to rely less on their cars when making journeys. In considering whether it is appropriate for a route to be regarded as an active travel route, a local authority must take into account:
- whether the route facilitates the making by, or by any description of, walkers and cyclists of active travel journeys; and
 - whether the location, nature and condition of the route make it suitable for safe use by, or by any description of, walkers and cyclists for the making of such journeys.
- 2.20 The Act requires Local authorities to produce and publish Existing Routes Maps. These maps show routes within the area that are suitable for active travel, and which meet standards set by the Welsh Government. As such the Existing Routes Maps, do not show all available walking and cycling routes within an area. The Welsh Government approved BCBC’s Existing Route Maps in January 2016. The Existing Route Maps for Bridgend are available at **Appendix B**.

Active Travel Act Guidance – July 2021

- 2.21 The Active Travel Act Guidance was published on 16 July 2021 and is issued using the powers of the Welsh Ministers to provide guidance under sections 2(6), 3(4), 4(5), 5(2) and 2(2) of the Active Travel Wales Act.
- 2.22 The guidance sets out the overarching vision of the Active Travel Act, with that being:
- “An accessible, sustainable and efficient transport system.”**
- 2.23 The act requires local authorities in Wales to produce maps of walking and cycling networks, and to deliver year on year active travel improvements along the mapped routes and their related

facilities. These routes should be coherent, direct, safe, comfortable and attractive. The maps shall now be known as Active Travel Network Maps (ATNM) – showing existing routes and future routes which shall combine the Existing Routes Map and the Integrated Network Map required by the act.

- 2.24 As well as creating the infrastructure, the act includes provision for making people aware of the existing and future routes through the publication of the maps and for the promotion of active travel as a means of transport.
- 2.25 The active travel network is designed to serve everyday journeys (also known as utility journeys). Examples of destinations which can be considered to form an everyday journey include school or other educational establishments, local shops, employment sites, healthcare facilities, and other destinations people travel to for a purpose.
- 2.26 Table 4.1 of the guidance provides a guide for network development in relation to reasonable distance that would be travelled by each active mode and is replicated as follows:

Active Travel Act Guidance (Table 4.1)

Mode	Less than 1 mile	Up to 2 miles	Up to 3 miles	Up to 4 miles	Up to 5 miles	Up to 7.5 miles	Up to 15 miles
	●	●	●	●	●	●	●
	●	●	●	●	●	●	●
	●	●	●	●	●	●	●

Colour	Average active user likelihood
●	Many users likely to travel this distance for utility journeys
●	Some users likely to travel this distance for utility journeys
●	Few or no users likely to travel this distance for utility journeys

- 2.27 Two out of every three journeys are less than five miles in length – an achievable distance to cycle for most people, with many short journeys also suitable for walking. For school children the opportunities are even greater: three quarters of children live within a 15-minute cycle ride of a secondary school, while more than 90% live within a 15-minute walk of a primary school.
- 2.28 The guidance further states that developments that do not adequately make provision for walking and cycling should not be approved. This may include adequate off-site improvements for pedestrians and cyclists using the existing highways that are affected by the development.

Wellbeing of Future Generations (Wales) Act 2015

- 2.29 This act seeks to improve the social, economic, environmental and cultural well-being of Wales. It contains seven well-being goals which local authorities as well as other public bodies must seek to achieve to improve wellbeing both now and in the future, several of which support this development's aim for the promotion of sustainable travel.
- 2.30 The most relevant goals in relation to the proposed development site are:
- A prosperous Wales – encouraging an innovative, prosperous and low carbon society;
 - A healthier Wales – a society in which choices and behaviours that benefit future health are understood;
 - A Wales of cohesive communities – promoting attractive, viable, safe and well-connected communities; and
 - A globally responsible Wales – considering improvement which make positive contributions towards global well-being.

The Future Generations Report 2020

- 2.31 This report occurs once every five years and sets out the Commissioner's assessment of the process made in implementing the Act within the reporting period.
- 2.32 The report provides the following vision for transport:

'Places, which embed active travel infrastructure, fully integrated with a high-speed reliable zero carbon, affordable and completely accessible public and community transport system. Transport that is co-designed with communities and citizens' needs in mind, and which improves the social, environmental, economic and cultural well-being of Wales'.

Local Policy

Bridgend Local Development Plan 2018-2033 (2024)

- 2.33 The Local Development Plan (LDP) was adopted in March 2024 and contains the objectives for the development and use of land in the Bridgend County Borough over the plan period from 2018 to 2033 and its policies to implement them.
- 2.34 A proposals map was created as part of the LDP showing Council proposed areas for residential, employment, education, recreational and infrastructure development which can be seen at **Appendix C**. Within this map the proposed site is highlighted as a site for Employment Allocation (ENT1(15)) and (ENT2(29)).
- 2.35 The LDP Strategic Policy 11: Employment Land Strategy states:

“Opportunities for economic growth will be facilitated by directing employment generating development to the most appropriate and sustainable locations, supporting expansion of existing businesses and ensuring strong spatial alignment between housing and employment”.

2.36 The LDP Strategic Policy 5: Sustainable Transport and Accessibility states:

“Development must be located and designed in a way that minimises the need to travel, reduces dependency on the private car and enables sustainable access to employment, education, local services and community facilities. Development must also be supported by appropriate transport measures and infrastructure, and depending on the nature, scale and siting of the proposal will be required to:

- **1) Accord with the sustainable transport hierarchy for planning (as set out in PPW);**
- 2) Be designed to provide safe and efficient access to the transport network, which includes the active travel, public transport and street networks;**
- 3) Safeguard, enhance and expand the active travel networks identified in the Council’s Existing Routes Map and ATNM, including links to those networks as a means of improving connectivity;**
- 4) Prioritise the delivery of the key transport measures and schemes identified in the Bridgend Local Transport Plan, which must be delivered in an efficient and timely manner in accordance with land use development. This includes resolving localised junction capacity issues where they restrain growth;**
- 5) Reduce reliance on private car use by maximising the potential of movement to/ from the development by public transport, including for the urban area ensuring developments are served by walking routes to public transport networks;**
- 6) Adopt a placemaking approach in the identification, design and delivery of all transport measures in order to maximise their contribution to sustainable development;**
- 7) Provide new transport infrastructure and improvement measures to mitigate the impact of the development and demonstrate the level and acceptability of impacts on the surrounding road network;**
- 8) Help to reduce transport related airborne pollution by enabling more sustainable travel choices and reducing the demand for travel by car; and**
- 9) Ensure that developments are served by appropriate parking provision, in accordance with the Council’s parking guidance, including infrastructure which caters for future technological developments such as electric vehicle charging points, and circulation areas, including adequate road widths to allow access for service vehicles.**

Development that would have a negative impact on the safe and efficient operation of the transport network will not be permitted.”

Local Transport Plan 2015 – 2030 (2015)

2.37 The Welsh Government now requires local authorities in Wales to prepare and adopt Local Transport Plans (LTPs) as the framework for identifying local transport schemes for improvements.

2.38 The vision of the LTP is:

“An effective, accessible, integrated and sustainable transport system that can meet the short-, medium- and long-term needs of a changing population, the economy and society”.

2.39 The Key priorities of the LTP are:

KP1 - To support economic growth and safeguard jobs with a particular focus on City Regions, Enterprise Zones and local growth zones

- Improved access to jobs and services by sustainable and active travel.
- Reduced congestion, improved journey time reliability, greater network resilience.
- Maximise potential to use bus and/or rail to access key employment and other sites.
- Improved access for freight.

KP2 - To reducing economic inactivity by delivering safe and affordable access to employment sites

- Seamless journeys and integrated ticketing.
- Affordable access to jobs, services and education.

KP3 - To maximise the contribution that effective and affordable transport services can make to transport poverty and target investment to support improvements in accessibility for the most disadvantaged communities

- Support rural areas by improving access to key services;
- Bus services that enable communities to access employment / services

KP4 - Encourage safer, healthier and sustainable travel • Increased take up of active and sustainable travel.

- Reduced number of personal injury accidents.
- Reduction in the negative impact of transport emissions on health and the environment.
- Increased number of journeys to tourism destinations being made by sustainable and active travel modes.

Supplementary Planning Guidance (SPG) 17 – Parking Standards (2008)

2.40 The Bridgend County Borough Council parking standards are based on SPG 17, which was produced in 2008. The parking standards are based on land uses and parking zones. Land use characteristics and transport characteristics have determined the allocated parking zone for each specific area. Maps showing the parking zones for Bridgend County Borough are provided in

SPG 17 - Parking Standards Volume 2, Map 21 shows the allocated parking zone for the development site is zone 5.

- 2.41 As there is a range of parking standards for land uses and the gross floor area for each land use for the proposed development has not been finalised yet the specific parking standards cannot be determined at this stage. However, during the reserved matters applications, the proposal will be developed in accordance with the parking standards set out in SPG17.

Summary

National and Local Policies

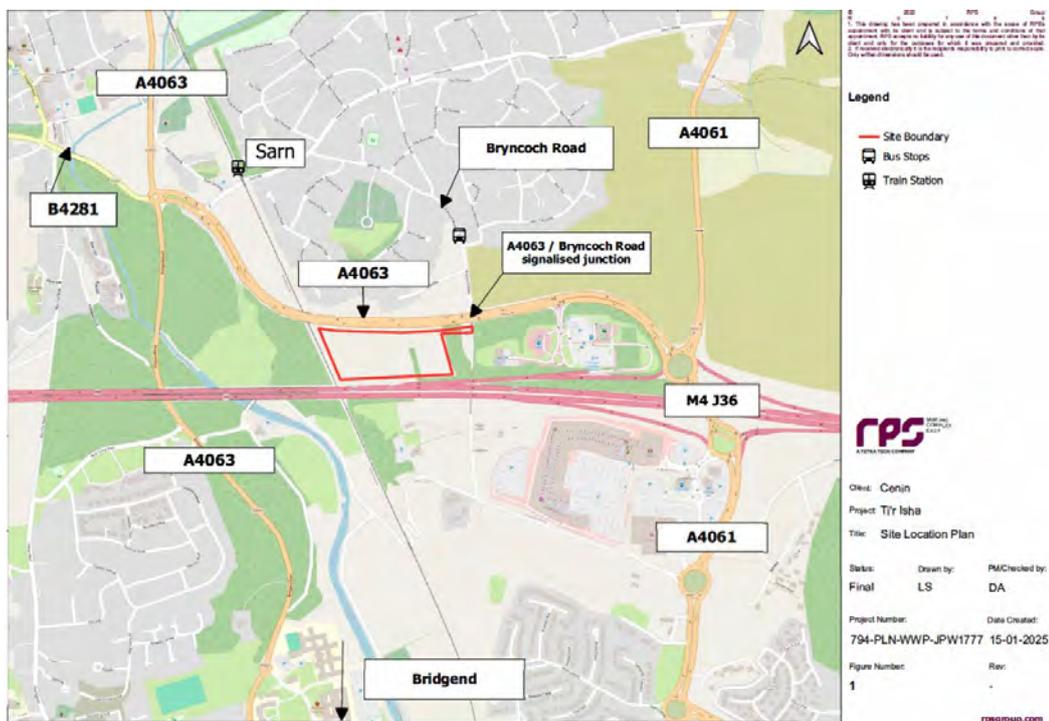

- 2.42 National policy aims to promote sustainable travel to and from developments. New developments should be in areas that maximise sustainable transport opportunities, provide for pedestrians and cyclists, manage traffic and parking levels, and incorporate street design and Travel Plans as a major influence for all new developments.
- 2.43 Local policy is provided by the LTP and LDP which identify the sustainable transport measures required to ensure BCBC adheres to current requirements and good practises for a sustainable transport environment. The site is allocated within the LDP for Employment Allocation.
- 2.44 The documents include policies that set out that all new developments must be highly accessible with emphasis on walking and cycling to reduce the number of short trips taken by car, promote the use of sustainable travel and have no unacceptable impact on highway safety or have an adverse impact on traffic congestion.
- 2.45 This section has identified relevant national and local transport related policies that are relevant to the proposed development. These policies and principles have been taken into account in the design of the proposed development. It is considered that the proposed development generally accords with these policies.

3 EXISTING AND BASELINE TRANSPORT CONDITIONS

Site Location

- 3.1 The site is located to the west of the Welcome Break Sarn Park Services and is bound by the A4063 to the north, the M4 to the south, an unnamed local access road which becomes a footbridge crossing over the M4 to the east, and a railway line (the Maesteg Line) to the west. Sarn is located further north of the site beyond the A4063. It is located approximately 1 kilometre south of Sarn and four kilometres north of Bridgend. The site in its wider geographical context can be seen on **Figure 1** which is also attached at **Appendix D**.

Figure 1: Site Location Plan

Local Highway Network

- 3.2 The local highway network is illustrated in **Figure 1**. The extent of the adopted highway in the vicinity of the site is included at **Appendix E**.

A4063

- 3.3 The A4063 routes from the north-west of the site to the east of the site along the northern site boundary. In the vicinity of the site, the A4063 is a dual carriageway road subject to a 50mph speed limit. Street lighting is provided along its length.

- 3.4 The road has three signalised junctions along its length. Two of the signalised junctions provide access to the area of Sarn. The most eastern signalised junction provides access to Welcome Break Sarn Park Services.
- 3.5 In the vicinity of the site a four-arm roundabout forms the north-western end of the A4063. One of the arms of the roundabout is the B4281 which routes westbound towards Cefn Cross and Cefn Cribwr. At this roundabout the A4063 continues north to Tondy, Maesteg and the Llynfi Valley and south into Bridgend.
- 3.6 To the south the A4063 is a single carriageway road, initially this is subject to national speed limit and has no footways, at the point the A4063 meets the M4 bridge the speed limit changes to 30mph, and a footway is provided. The A4063 provides access to the north-western and western area of Bridgend. To the north the A4063 is a single carriageway road and is subject to national speed limit initially with no footways provided. At the Bryn Road / Bridgend Road junction the speed limit reduces to 30mph, and footways are provided. To the north the A4063 continues up into the South Wales Valleys.
- 3.7 A five-arm roundabout forms the eastern extent of the A4063, one arm of this roundabout is the eastbound exit slip road for the M4 junction 36 with another arm forming the eastbound on slip road for the M4 junction 36. Two arms form the A4061 which routes north towards Brynemydd and south into Bridgend.
- 3.8 Whilst footways are not currently provided along the length of the A4063, at the Bryncoch Road / A4063 signalised junction signal-controlled pedestrian crossings are provided to allow access to the existing shared footway / cycleway along Bryncoch Road and the shared footway / cycleway that routes south from the A4063. At the Bryncoch Road signalised junction signalised crossing facilities are provided to allow access between the footways along Bryncoch Road and shared footway / cycleway that routes south and crosses the M4.

A4061

- 3.9 The A4061 routes north to south to the east of the site and is accessed from the site via a five-arm roundabout to the east of the site. North of this roundabout the A4061 routes towards Bryncoch, Bryncethin and the Garw and Ogmore Valleys. These sections of the A4061 are a single carriageway road, it is initially subject to a 50mph speed limit which becomes 30mph on entry to Bryncoch and Bryncethin. Streetlighting is provided along its length with a footway provided on its eastern side.
- 3.10 To the south of the five-arm roundabout the A4061 routes into Bridgend. The A4061 crosses the M4 via a bridge and leads to a five-arm roundabout which provides access to the M4 westbound on slip road and off slip road. This five-arm roundabout also providing access to M4 services and McArthur Glen Design Outlet. Further south the A4061 leads to a four-arm roundabout which also provides access to the services and designer outlet. The A4061 then continues south to provide access to the north-eastern area of Bridgend.

Bryncoch Road

- 3.11 Bryncoch Road is accessed via a signalised junction with the A4063 located to the immediate east of the site. This is a single carriageway road subject to national speed limit for the initial 100 metres the speed limit then changes to 30mph. A footway is provided on the western side of

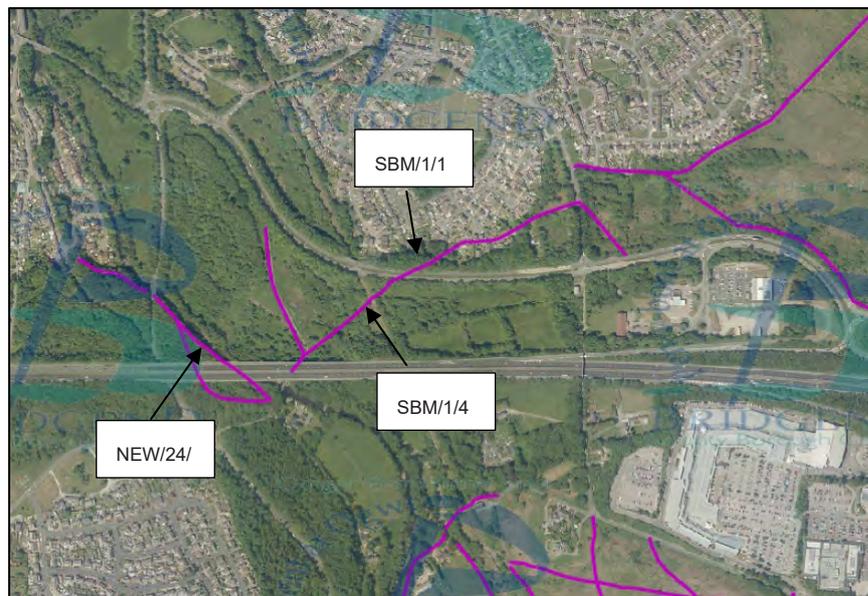

carriageway for the first 120m and is then provided on both sides of the carriageway, street lighting is also provided along its length.

- 3.12 Bryncoch Road continues north until it meets Heol Canola providing access to residential areas of Sarn. Heol Canola routes east to west providing access to Bryncoch via the A4061 to the east and the A4063 to the west.

Walking and Cycling

- 3.13 There are no footways provided along the A4063 in the vicinity of the site. However, to the immediate north east of the site along Bryncoch Road footways are provided on the western side of the carriageway for the first 120m and are then provided on both sides of the carriageway. Footways along Bryncoch Road can be accessed via a signalised pedestrian crossing of the A4063, this provides access to a single-track road south of the A4063 which leads to footbridge over the M4 and into the residential areas to the north of Bridgend.
- 3.14 There are public footpaths within the vicinity of the site, the locations of these are shown on **Figure 2**. The closest footpath to the site is SBM/1/1 routes broadly northeast to southwest to the west of the site, the footpath crosses the A4063, but no crossing facilities are currently provided. To the northeast the footpath routes into Sarn, to the southwest this connects to SBM/1/4 and NEW/24/1 via Rhyd Lane.

Figure 2: Public Rights of Way

- 3.15 National Cycle Route 885 routes broadly north to south to the west of the site routing between Bridgend to the south and Tondy to the north before connecting to cycle route 4. Route 4 routes broadly east to west between London and Fishguard.

Public Transport

Bus

- 3.16 The closest bus stops to the site are located approximately 200m north of the A4063 along Bryncoch Road. The bus stops are named Bryncoch Road and have a shelters, these bus stops serve routes 73, 74 and 76. The details of the frequency and route of each of these services in **Table 3.1**.

Table 3.1: Summary of Bus Services from Bryncoch Road Bus Stops

Service Number	Stop	Route	Weekday Frequency (per hour)			Time	
			AM Peak (0700-0900)	Inter-Peak	PM Peak (1630-1830)	First Arrival	Last Departure
73	Bryncoch Road	Bridgend – Blaengarw	-	-	One Service	17:44	20:14
74	Bryncoch Road	Bridgend – Nantymoel	Three services	Two per hour	Three services	07:43	20:42
76	Bryncoch Road	Bridgend – Bettws	Two services	One per hour	One Service	07:34	16:37

Rail

- 3.17 The site is located approximately 1 kilometre from Sarn Railway Station which provides regular arrivals and departures to / from Cheltenham Spa, Cardiff Central, Bridgend, Newport, and Maesteg. The walking isochrone map for the site is shown by **Figure 3** and **Figure 4** show that the journey distance would be less than 1 mile which is a reasonable walking and cycling distance according to Active Travel Wales.
- 3.18 The 73, 74 and 76 bus services serve the Sarn Post Office bus stop, which is the closest bus stop approximately 450 metres from the railway station.
- 3.19 The destinations and frequency of services provided from Sarn Railway Station are summarised in **Table 3.2**.

Table 3.2: Summary of Rail Services from Sarn Rail Station

Sarn (SRR) Railway Station - Arrivals			
Origin	Weekday Frequency		
	AM Peak (0700-0900)	Inter-Peak	PM Peak (1630-1830)
Cheltenham Spa	60 mins	60 mins	60 mins

Site Accessibility by Non-Car Modes

- 3.20 The proposed development is currently accessible by three bus services, a National Cycle Network route and has a railway station within 1 kilometre of the site, allowing for combined journeys and linked trips to be made.
- 3.21 Walking isochrone maps from the point of walking and cycling access to the proposed building available at **Appendix H**, and a cycle isochrone map is provided at **Appendix I**.

Personal Injury Collision Data

- 3.22 Personal Injury Accident (PIA) data from Crashmap covering the latest available five-year period 2018-2022 (inclusive) has been used to assess road safety. Data has been sourced from Welsh Government in November 2024 and at the time of PAC is awaiting receipt; thus for the purposes of PAC, Crashmap data has been assessed.
- 3.23 Locations considered to be affected by the development have been selected to give an overview of the existing safety of the local highway networks. The network for which the PIA data search was requested is shown in **Appendix F**.

Table 3.3: Summary of PIAs

Severity	Number of PIAs
Slight	20
Serious	3
Fatal	1
Total	24

- 3.24 As shown by **Table 3.3** there were a total of 24 PIAs during the five-year period; 20 of which resulted in slight injury, three of which resulted in serious injury and one of which resulted in fatal

injury. An analysis of the data determined that there were no PIA clusters (four or more occurring at the same location or within 25 m of each other) within the study area.

- 3.25 The one fatal PIA occurred at the A4063 / Bryncoch Road signalised junction, this PIA appears to have occurred when a driver disobeyed a red signal and collided with a pedestrian using the signalised pedestrian crossing. This is likely a result of driver delay and failure to obey signals.
- 3.26 The three serious PIAs occurred at two separate locations. One serious PIA occurred along the A4063 approximately 300m east of the Sarn Hill / A4063 signalised junction and involved a single vehicle that collided with a tree off the carriageway, it was dark, but conditions were dry without ice or winds. Therefore, it appears this PIA occurred as a result of driver error.
- 3.27 Two of the serious PIAs occurred in the vicinity of the A4063 / Sarn Hill signalised junction. One occurred as a result of a shunt and the other as a result of a vehicle changing lanes. Both appear to have resulted from driver error.
- 3.28 All other slight PIAs occurred at different locations and did not form any clusters and do not suggest any current highway safety issues.
- 3.29 An analysis of the PIAs determined there were no consistent contributory factors amongst the PIAs that could be attributed to the highway network. It is considered that there no underlying road safety issues along the highway network within the vicinity of the site.

4 DEVELOPMENT PROPOSALS

- 4.1 The development site comprises approximately 10.3 acres, with no current vehicular access. The concept site layout includes a single linear building, responding to the shape of the site. The building is set back from the ancient woodland, providing an offset. A new access junction could be provided from the A4063 ramping down to a loop road wrapping around the building and allowing for circulation. The existing watercourse running through the site could be diverted, with a basin to the west of the site and surface water attenuation underneath the parking. New banks and ground levelling works are proposed to tie back into the existing.
- 4.2 The concept site plan shows a three-storey building with a double shallow pitch roof and a parapet. It responds to the levels of the site, with entrances at ground and lower ground level.
- 4.3 The approximate gross internal floor area for the building is 32,000m², with the following internal gross floor areas for the three storeys;
- Lower ground floor: c. 6,000m²
 - Ground floor: c. 13,000m²
 - First floor: c. 13,000m²
- 4.4 A copy of the proposed concept site plan is attached at **Appendix A**. The site allocation is for B1, B2 and B8 uses.
- 4.5 This outline planning application is for the Ti'r Isha Employment Area site, which forms part of the Bridgend Energy Hub project by Cenin. Bridgend Energy Hub is a future generations project, covering a total of 4 sites, that uses the generation of low-cost sustainable electricity, to deliver major economic, environmental and transportation benefits to Bridgend and the surrounding area.
- 4.6 Alongside the Employment Area, the Bridgend Energy Hub includes:
- Mynydd y Gaer Wind Farm – sustainably supplying the total power needs for 60,000 homes, producing local power that would help Bridgend reach its net zero aspirations.
 - Ty'n y Waun Solar – an innovative scheme that will bring a wide range of benefits to the local area and provides enough power for approximately 12,500 homes.
 - Junction 36 Transport Hub – located just off the M4, this will be a travel centre for future transport needs, shaped by the local community to best deliver for the people of Bridgend.

Vehicular Access Strategy

- 4.7 It is expected that the development is accessed from the A4063 along the northern extent of the development site. Given the dual carriageway nature, such an access would be a left in / left out arrangement and an illustrative access layout is available at **Appendix G**.
- 4.8 On the eastern side of the access a 3m wide shared use footway / cycleway can be provided to connect with the signalised crossing over the A4063.

Servicing

- 4.9 Suitable servicing, including adequate turning space, would be provided for refuse vehicles. Designated areas for waste collection would also be provided. Internal carriageway design and servicing will be finalised as part of a reserved matters application.

Parking

- 4.10 As presented by the concept site plan at **Appendix E**, car parking spaces will be proposed including those with blue badges and electric vehicle car parking as well as cycle parking. The proposed location, layout and quantum of these would be developed as part of the proposals for reserved matters in accordance with the parking standards set out in BCBC's SPG 17 Parking Standards.

Accessibility

- 4.11 Pedestrian and cyclist access would be provided onto the A4063 and to the east to the bridge over the M4 such that the site provides active travel links to the surrounding areas and onto roads that would be conducive for cycling along.
- 4.12 Guidance on walking and cycling distances is set out in Table 4.1 of the Welsh Government publication 'Active Travel Act Guidance', July 2021, an extract of which is set out on **Figure 3**.

Figure 3: Welsh Government Guidance on Walking and Cycling Distances

Mode	Less than 1 mile	Up to 2 miles	Up to 3 miles	Up to 4 miles	Up to 5 miles	Up to 7.5 miles	Up to 15 miles
	●	●	●	●	●	●	●
	●	●	●	●	●	●	●
	●	●	●	●	●	●	●

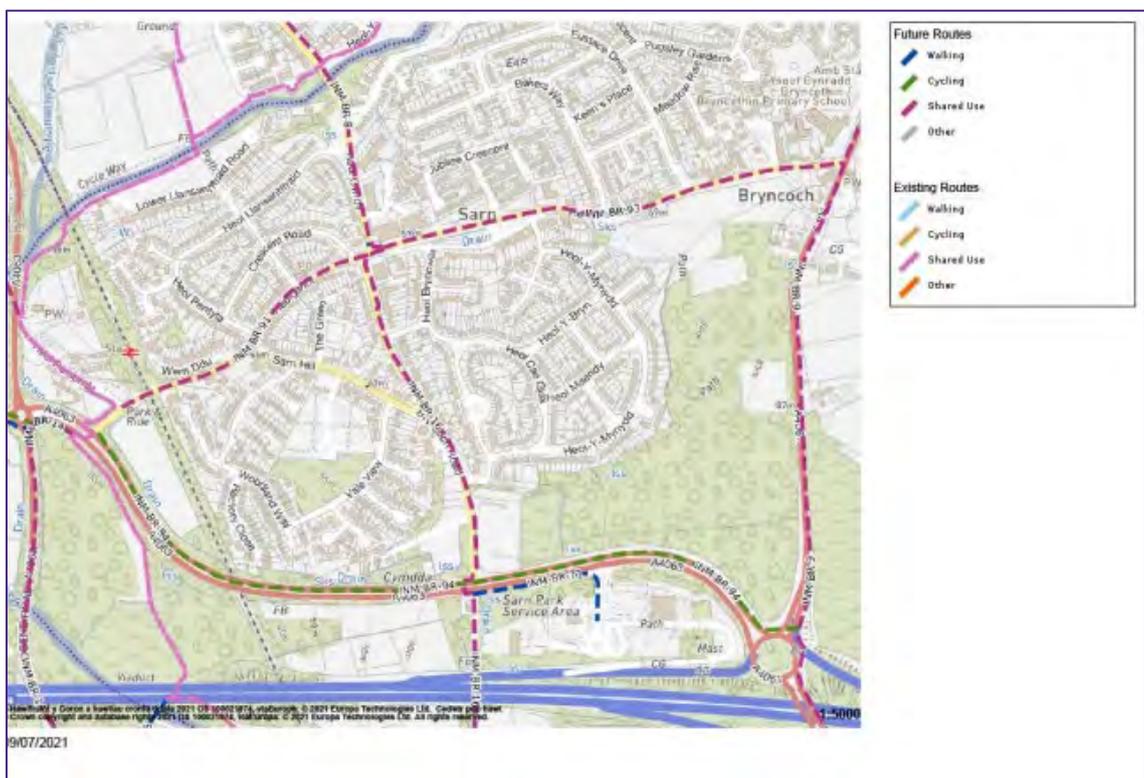

Colour	Average active user likelihood
●	Many users likely to travel this distance for utility journeys
●	Some users likely to travel this distance for utility journeys
●	Few or no users likely to travel this distance for utility journeys

Source: Welsh Government: Active Travel Act Guidance, July 2021, Table 4.1

- 4.13 As can be seen, Welsh Government considers many users are likely to walk up to two miles (3.2km) for utility journeys with some users likely to walk up to three miles (4.8km) for such uses.
- 4.14 In terms of cycling, Welsh Government considers many users are likely to cycle up to five miles (8.0km) for utility journeys with some users likely to cycle up to 7.5 miles (12.0km) for such uses.

- 4.15 **Appendix H and Appendix I** only show an indicative walking isochrone up to 3 miles and an indicative cycling isochrone for up to 5 miles. These show that the Bryncoch Road bus stop, Sarn Railway station and the majority of Sarn and Bridgend are accessible from the site via active travel, which are significantly within the Welsh Government threshold.
- 4.16 Bridgend County Borough Council in partnership with Sustrans Cymru, is undertaking a review of the Active Travel Network Maps in the borough. They have produced maps showing existing active travel routes – routes that meet the standards required to be labelled as active travel routes. The maps also show proposed access travel routes, an extract of the map has been included at **Figure 4** below.

Figure 4: Map of Proposed Active Travel Routes in the Vicinity of the Proposed Site

- 4.17 In the vicinity of the site **Figure 4** shows a future cycleway along the A4063 between the A4061 roundabout and the A4063 / Sarn Hill signalised junction. This will link to a future shared use route at the eastern extent and an existing shared use route at the western side.
- 4.18 Also, in the vicinity of the site a shared use route is proposed between Sarn and the A4063, this will also provide access to other future shared use routes.
- 4.19 These two future routes require third party land and therefore could not be fully provided by the applicants, however the applicants will agree a contribution towards active travel with BCBC to assist with the delivery of these proposals and also to improve the accessibility of the development proposal for active travel.

Sustainable Access Strategy

- 4.20 The development will be designed to maximise the level of sustainable transport capability to the site. This will be achieved through the creation of walking and cycling links onto the existing highway network and pedestrian and cycling infrastructure and appropriate walking and cycling facilities.

Walking

- 4.21 The internal walking routes of the development will be well lit and include a connecting route along predicted desire lines to link onto the surrounding infrastructure crossing the A4063 and north along Bryncoch Road including the existing bus stops.
- 4.22 Walking distances are shown in the isochrone map provided at **Appendix H**.

Cycling

- 4.23 A shared use footway / cycleway is to be provided as part of the development. This will route along the site access road and connect to the signalised crossing over the A4063.
- 4.24 Cycling distances are shown in the isochrone map provided **Appendix I**. Cycle parking spaces will also be provided on site (to be developed as part of future reserved matters applications).

Key Origin Locations

- 4.25 Sustainable travel will be provided from the surrounding key origins and the active travel routes and existing public transport links will provide access from these locations.
- 4.26 Walking and cycling links will be provided to Bridgend and Sarn by existing infrastructure as well as the proposed future infrastructure.

Summary

- 4.27 The development proposals will follow the guidance set out within the relevant supporting National and Local policy documents. Full details of the development will be determined in the future reserved matters application.

5 DEVELOPMENT TRAVEL DEMAND

Introduction

- 5.1 An overview of the anticipated travel demand of the proposed development by all modes of travel is provided within this chapter. The predicted number of trips has been generated and the modal share has been considered.
- 5.2 Section 6 sets out that traffic surveys have been undertaken on the A4063 and have identified the network peak hours as 07:45-08:45 in the AM and 16:30-17:30 in the PM. Whilst individual junctions may have different peak hours, the development traffic has been considered across the whole network and therefore the model peak hours are considered to be the correct peak hours for modelling the impact of the development on the highway network.

Vehicle Trip Generation

- 5.3 As set out in Section 4, this employment area forms part of the Bridgend Energy Hub project by Cenin, a future generations project, covering a total of 4 sites, that uses the generation of low-cost sustainable electricity, to deliver major economic, environmental and transportation benefits to Bridgend and the surrounding area.
- 5.4 As part of that vision, Cenin does not envisage the employment area being one that generates significant levels of travel demand, as reflected on the concept site plan attached at **Appendix A**. Rather, low levels of travel demand are envisaged at the employment area as part of the vision of the Bridgend Energy Hub.
- 5.5 To estimate the potential travel demand of the site, the TRICS trip generation database was interrogated for trip rate information at similar sites in terms of use class and locations. To consider the travel demand of a low generating site commensurate with the vision of the Bridgend Energy Hub, for assessment purposes, a low staffed employment use has been considered. For assessment purposes, trip rates have been calculated from TRICS for a data centre. These trip rates are set out in **Table 5.1** below, with the calculated resultant trip generation. The TRICS output reports are available at **Appendix J**.
- 5.6 Section 4 sets out the building area in terms of gross internal area. To estimate the Gross Floor Areas (GFA) a wall thickness of 500mm has been assumed, which gives a total GFA of 32,320m².

Table 5.1: Vehicle Trip Rates and Vehicle Trips (low staffed employment area)

Time	Arrivals		Departures		Two-way	
Low Staff (e.g. Data Centre)						
	Trip Rate	Trips	Trip Rate	Trips	Trip Rate	Trips
AM Peak Hour (07:30-08:30)	0.129	42	0.027	9	0.156	50
PM Peak Hour (16:30-17:30)	0.018	6	0.083	27	0.101	33
12 Hour (07:00 - 19:00)	0.560	181	0.588	190	1.148	371
Total						
		Trips		Trips		Trips
AM Peak Hour		42		9		50
PM Peak Hour		6		27		33
12 Hour		181		190		371

5.7 For the purposes of assessment, the TRICS online database was also interrogated for trip rate information at similar sites in terms of use class and locations with typical staffing and travel demand levels. The estimated vehicle trip rates calculated from the TRICS database include sites with typical staff generation, such as general industrial, in accordance with the allocation. For assessment purposes, if it is assumed that a proportion of the site may be occupied by such a use whilst the remainder is occupied by a use with low staffing levels, as above. The trip rates and associated traffic generations are shown in **Table 5.2**. The TRICS output reports for the typical staffing levels are attached at **Appendix K**.

Table 5.2: Vehicle Trip Rates and Vehicle Trips (mix of low and typical staffed employment area)

Time	Arrivals		Departures		Two-way	
Typical Staffing (e.g. General Industrial) (6000m² GFA)						
	Trip Rate	Trips	Trip Rate	Trips	Trip Rate	Trips
AM Peak (08:30-09:30)	0.499	30	0.303	18	0.802	48
PM Peak (16:30-17:30)	0.239	14	0.535	32	0.774	46
12 Hour (07:00 - 19:00)	4.010	241	4.050	243	8.060	484

Low Staffing (e.g. Data Centre) (26,320m ² GFA)						
	Trip Rate	Trips	Trip Rate	Trips	Trip Rate	Trips
AM Peak (07:30-08:30)	0.129	34	0.027	7	0.156	41
PM Peak (16:30-17:30)	0.018	5	0.083	22	0.101	27
12 Hour (07:00 - 19:00)	0.560	147	0.588	155	1.148	302
Total (32,320m ² GFA)						
	Trips		Trips		Trips	
AM Peak	64		25		89	
PM Peak	19		54		73	
12 Hour (07:00 – 19:00)	388		398		786	

- 5.8 The proposed development will be supported by a Travel Plan that will reduce single occupancy vehicle (SOV) trip generation to the site. Targets to move modal share away from private car use will be implemented.
- 5.9 Additionally, measures will be put in place from the outset of the development, including those set out in an FTP.

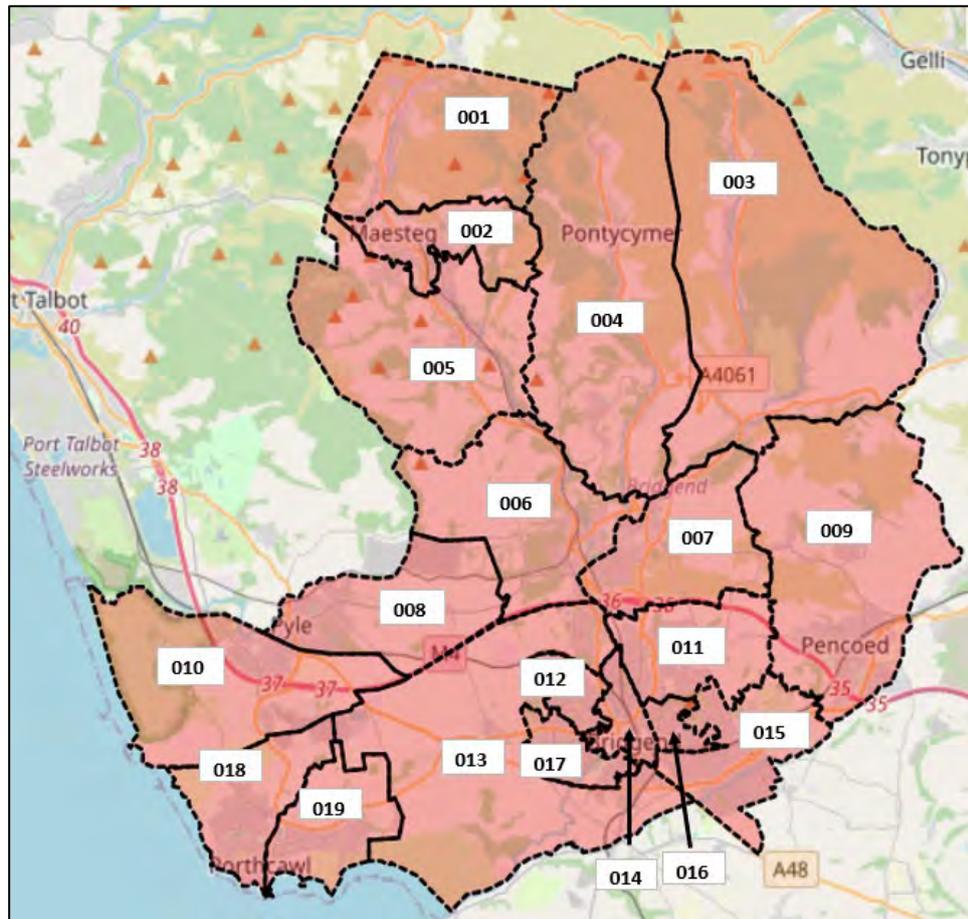

Modal Share

- 5.10 A baseline modal share for the development has been estimated using the Nomis Method of travel to work (WP703EW) from the 2011 census. This data was acquired for MSOA (Middle Super Output Area) 'Bridgend 007', within which the development site is located. An analysis of the modal shares to MSOAs was also undertaken for those that surround the site (MSOA Bridgend 003, 004, 006, 009 and 011) to consider the suitability of the MSOA Bridgend 007 modal share, as set out in **Table 5.3**. The locations of the MSOAs that are compared in **Table 5.3** are shown on **Figure 5**.

Table 5.3: Modal Share for MSOAs around the Development Site

Method of Travel to Work	W02000220 : Bridgend 003	W02000221 : Bridgend 004	W02000223 : Bridgend 006	W02000224 : Bridgend 007	W02000226 : Bridgend 009	W02000228 : Bridgend 011
Train	1%	0%	2%	1%	1%	1%
Bus, minibus or coach	4%	3%	3%	6%	2%	4%
Taxi	0%	1%	1%	1%	0%	1%
Motorcycle, scooter or moped	0%	0%	0%	1%	0%	1%
Driving a car or van	67%	71%	78%	76%	81%	77%
Passenger in a car or van	10%	8%	8%	11%	8%	7%
Bicycle	1%	0%	1%	0%	1%	1%
On foot	16%	15%	6%	4%	6%	8%
Total	100%	100%	99%	100%	100%	100%

Figure 5: Location of MSOAs in Bridgend

- 5.11 **Table 5.3** shows that the modal shares to the MSOA areas are all broadly similar to one-another with the exception of MSOA Bridgend 003 and 004. MSOA Bridgend 003 and 004 have slightly lower modal shares for driving a car or van compared to the other areas, also showing that these two areas have higher modal shares for walking. MSOA Bridgend 003 and 004 have similar characteristics to each other, being adjacent to one another in the Garw and Ogmore Valleys with similar highway networks and with similar proximities to Bridgend and the site.
- 5.12 The precise reasoning for the modal shares to these two MSOA areas being different to the others in **Table 5.3** is difficult to confirm, however, the data shows the modal shares to MSOA Bridgend 007 are broadly similar to those other MSOAs that surround it. Therefore it is considered that the modal shares to MSOA Bridgend 007 would be appropriate for estimating that for the proposed development.
- 5.13 The potential mode share and subsequent number of trips by all modes based on the MSOA Bridgend 007 modal share is shown below in **Table 5.4**.

Table 5.4: Baseline Multi Modal Trip Generation

Mode	Mode Share	AM Peak Hour (07:45-08:45)			PM Peak Hour (16:30-17:30)		
		In	Out	Total	In	Out	Total
Train	1%	1	0	1	0	1	1
Bus, minibus or coach	6%	5	2	7	2	4	6
Taxi	1%	1	0	1	0	0	1
Motorcycle, scooter or moped	1%	1	0	1	0	1	1
Driving a car or van	76%	63	25	89	19	54	73
Passenger in a car or van	11%	9	4	13	3	8	10
Bicycle	0%	0	0	1	0	0	0
On foot	4%	4	1	5	1	3	4
Total	100%	84	33	117	25	71	96

* Numbers may not total due to rounding

- 5.14 It is noted that the modal share data is based upon 2011 census data. The method of travel to work data from the 2021 census was affected by different travel habits being undertaken during Covid-19 and is not representative as a result.
- 5.15 To consider whether there may have been any changes in travel to work characteristics from MSOA 007 between the 2011 and 2021 census, a comparison of distance travelled to work can be undertaken. Census data for distance travelled to work (QS702EW) has therefore been assessed. **Table 5.5** presents the comparison between 2011 and 2021.

Table 5.5: Summary of Distance Travelled to Work for MSOA Bridgend 007

Distance travelled to work	2011	2021	2011 %	2021 %	Percentage change
Total	2,622	1,960	100%	100%	
Less than 2km	363	298	14%	15%	1%
2km to less than 5km	650	513	25%	26%	1%
5km to less than 10km	795	453	30%	23%	-7%
10km to less than 20km	425	307	16%	16%	-1%
20km to less than 30km	274	252	10%	13%	2%
30km to less than 40km	63	75	2%	4%	1%
40km to less than 60km	29	21	1%	1%	0%
60km and over	23	41	1%	2%	1%

- 5.16 The comparison of 2011 and 2021 distance travelled to work data shows that there was a seven percentage point reduction in journeys between 5km and 10km. This was balanced by approximately one percentage point increases across all other distance bandings. This includes both those below 5km and also those above 10km. Given that there hasn't been a consistent

shift from one distance banding to another singular distance banding, that the changes are spread across all distance bandings and that the majority of changes as a whole relate to distance bandings that would mostly be undertaken by car (with reference to the modal share, above), it is considered that any changes in the 2011 census travel to work data to 2021 would not be such that it would result in the 2011 census data being unsuitable for use. It is considered that the 2011 census data provides a reasonable dataset on which to estimate travel to work mode shares to the site.

Development Traffic Distribution and Assignment

- 5.17 The distribution and assignment of the proposed development traffic flows has been determined using Nomis 'Location of usual residence and place of work by method of travel to work' data from the 2011 census (WU03EW).
- 5.18 Routing software has then been utilised to identify the travel routes between these origins and the site and consider the vehicular assignment of trips. Full details of how traffic has been assigned is included within **Appendix L**.
- 5.19 The total development traffic flow on the surrounding road network is shown in **Table 5.6** below. These show the development flows for both the morning and evening peak which represent the busiest periods on the highway network.

Table 5.5: Summary of Trip Distribution and Assignment

Route	Arrivals %	Departures %	AM Peak Hour (08:00-09:00)			PM Peak Hour (17:00-18:00)		
			Arrivals	Departures	Total	Arrivals	Departures	Total
M4 West	18%	19%	12	5	16	3	10	14
M4 East	22%	20%	14	5	19	4	11	15
A4063 North via Bryncoch Road	10%	0%	6	0	6	2	0	2
A4063 North	0%	20%	0	5	5	0	11	11
A4063 South	0%	12%	0	3	3	0	7	7
A4061 North	16%	9%	10	2	12	3	5	8
A4061 South	17%	6%	11	2	13	3	3	6
A4064 via Bryncoch Road	3%	0%	2	0	2	0	0	0
B4281	0%	12%	0	3	3	0	6	6
B4281 via Bryncoch Road	6%	0%	4	0	4	1	0	1
A4063 South via Bryncoch Road	3%	0%	2	0	2	1	0	1
Bryncoch Road	4%	0%	2	0	2	1	0	1

A4063 north (A4063 U-turn) (via Bryncoch Road for Departures)	1%	3%	1	1	1	0	2	2
A4063 South (A4063 U-turn)	0.4%	0%	0	0	0	0	0	0
Total	100%	100%	64	25	89	19	54	73

5.20 Traffic flow diagrams are included in **Appendix L** together with distribution and assignment plans.

6 TRANSPORT IMPACT

6.1 This section of the report considers the potential transport impact that the development may have on the local highway network, considering the predicted trip generation identified in **Section 5**.

Baseline Traffic Flows

6.2 This assessment has been informed by a Manual Classified Count (MCC) with queue lengths undertaken 07:00 to 09:30 and 15:00 to 19:00 on 11th July 2024 at the A4063 / Bryncoch Road signalised junction and radar surveys undertaken on the A4063 to the west of Bryncoch Road over the period Thursday 4th July to Wednesday 10th July 2024. The radar data was corrupted on 11th July.

6.3 The peak hour data from the MCC has determined the peak hour traffic flows at the proposed site access located 100m west of this junction. The raw traffic survey data is included at **Appendix M**.

6.4 In order to undertake a robust analysis of the impact that the proposed development may have on the operation of the adjacent highway network, the 2024 traffic flows have been growthed to 2028. The proposals will need to be granted outline planning consent and obtain reserved matters consent prior to any construction works and occupation. For assessment purposes, an assessment year of 2028 has been adopted.

6.5 The TEMPRO growth rates that have been applied are shown in **Table 6.1**.

Table 6.1: TEMPRO Growth Rates

Tempro Growth Rate	
2024-2028	
AM Peak	1.037
PM Peak	1.036

Assessment Scenarios

6.6 Junction assessments will be undertaken at the aforementioned junctions for both the AM and PM peak hours for the following scenarios.

- 2024 Observed;
- 2028 Baseline; and
- 2028 Baseline + Development.

6.7 Observed, base and future year scenario traffic flow diagrams are included in **Appendix N**.

6.8 The A4063 / Bryncoch Road signalised junction has been modelled using LinSig software which is a standard modelling programme used for assessing signalised junctions. The model has been set up using signal specification data obtained from BCBC, as attached at **Appendix O**, and

calibrated with the queue length surveys. The impact analysis output is included at **Appendix P**.

- 6.9 The proposed site access junction has been assessed using Junctions 11 modelling software which is a standard modelling programme used for assessing priority junction arrangements, the impact analysis output is included in **Appendix Q**.

A4063 / Bryncoch Road Signalised Junction

- 6.10 A summary of the assessments undertaken during the AM and PM peak hours, showing the degree of saturation and mean maximum queue (MMQ) are outlined in **Table 6.2**. The practical reserve capacity, total delay and cycle time are also presented for the junction for each scenario in **Table 6.2**. A copy of the full output report is attached at **Appendix P**.

Table 6.2 Summary of Operational Assessments at the A4063 / Bryncoch Road Signalised Junction

Road Name	Arm	Lane Description	AM Peak			PM Peak		
			MMQ (pcu)	Delay (s/pcu)	Deg Sat	MMQ (pcu)	Delay (s/pcu)	Deg Sat
2024 Observed								
Bryncoch Road	1/1	Left Right	8.2	46.6	66.2%	6.1	60.8	66.7%

A4063 Eastbound	4/2	Ahead	13.2	38.1	71.9%	11.1	47.1	71.2%
Practical Reserve Capacity				23.9		26.4		
Total Delay (pcuHrs)				21.53		20.77		
Cycle Time (Secs)			98			104		

- 6.11 The table shows that the junction currently operates within capacity during the AM and PM peak hours and is predicted to remain operating within capacity in the 2028 baseline and 2028 baseline plus development scenarios.

A4063 / Proposed Site Access Priority Junction

- 6.12 The proposed A4063 / site access junction would be a left in / left out priority junction, located approximately 100m west of the A4063 / Bryncoch Road signalised junction. The proposed access design and location is shown at **Appendix G**.
- 6.13 A summary of the assessments undertaken during the AM and PM peak hours, showing the Ratio of Flow to Capacity (RFC) and queue length are set out in **Table 6.3**. A copy of the full output report is attached at **Appendix Q**.

Table 6.3: Summary of Operational Assessments at the A4063 / Site Access Junction

Arm	Queue (PCUs)	AM Peak		PM Peak		
		Delay (S)	RFC	Queue (PCUs)	Delay (S)	RFC
2028 Baseline + Development						
Site Access Left	0.0	4.96	0.04	0.1	5.75	0.09

- 6.14 The table shows that the junction is predicted to operate within capacity during the AM and PM peak hours in the 2028 baseline plus development scenarios.

7 TRANSPORT IMPLEMENTATION STRATEGY

Site Access and Sustainable Transport Proposals

7.1 Transport proposals have been developed to maximise the potential of sustainable travel modes other than private car journeys, limiting the potential traffic impacts that may arise from the development. The proposals consist of the following measures:

- Framework Travel Plan (FTP);
- Walking and Cycling Strategy;
- Public Transport Strategy; and
- Vehicular Access Strategy.

Framework Travel Plan

7.2 An FTP for the scheme will be developed in accordance with the appropriate national and local policy guidance. The plan will be implemented site-wide prior to occupation.

7.3 Aims and objectives set out within an FTP will be achieved through the implementation of measures, initiatives and marketing that are aimed at decreasing single occupancy vehicle use and increasing use of sustainable travel modes.

Walking and Cycling Strategy

7.4 High priority has been given to walking and cycling within the design of the illustrative access design. This is shown by the proposed shared use footway / cycleway link onto the existing crossing facilities over the A4063. Contributions would be made to assist BCBC provide further active travel infrastructure and facilities would be provided within the development to encourage walking and cycling such as showers and changing rooms.

Public Transport Strategy

Bus Services

7.5 As set out in **Section 3** the site is currently accessible by a number of bus services from key destinations of Bridgend, Sarn, Bettws, Blackmill and others. The nearest existing bus stops and rail station to the site are within 200m of the access and are well within reasonable walking distances.

7.6 The 73 bus service is operated by First Cymru and provides one service in the PM peak between Bridgend and Blaengarw. The journey time from Bridgend to the site is approximately 15 minutes using this service and from Blaengarw to the site is approximately 40 minutes.

7.7 The 74 bus service is operated by First Cymru and provides three services during the AM and PM peak periods and two services per during the inter-peak period between Bridgend and Nantymoel. The journey time from Bridgend to the site is approximately 30 minutes and from Nantymoel to the site is also approximately 30 minutes.

- 7.8 The 76 bus service is also operated by First Cymru and provides two services during the AM and PM peak periods and one service per hour during the inter-peak period between Bridgend and Bettws. The journey time from Bridgend to the site is approximately 15 minutes and between Bettws and the site is approximately 20 minutes.

Train Services

- 7.9 Sarn Railway Station benefits from frequent train services from key origin destinations. The proposed site is within one mile walking distance from the site and within a reasonable walking distance.
- 7.10 Sarn Railway Station currently has a frequency of two arrivals and two departures per hour.
- 7.11 Walking and cycling routes will be provided from the development that connect onto existing walking and cycling infrastructure and provide routes to Sarn Railway Station.

Development Compliance

- 7.12 The development will comply with the policies, plans, notes and acts set out within **Section 2**. The site is allocated for employment use and is well located in relation to public transport opportunities (one railway station and three bus services) and can serve the economic needs of Bridgend whilst creating a strong, happy working environment.
- 7.13 The importance of pedestrian and cycling infrastructure will be incorporated within the detailed design, with a shared use footway / cycleway at the access junction and the internal site access road linking onto the existing infrastructure providing access to Bridgend and Sarn.
- 7.14 A FTP will be prepared and then implemented site-wide, with a Travel Plan Co-ordinator (TPC) compulsory. The FTP will be written in line with Bridgend's Travel Plan guidance document and will inform future employees of the sustainable travel choices available to access the development, measures for healthier living that are to be provided and accessibility, timetables and discounts for public transport. Monitoring reports of the FTP will be submitted to BCBC by the TPC annually. Changes to the way the FTP is marketed, and the measures promoted within it will then be examined and alterations could be made if needed.

Summary

- 7.15 The development complies with the National and Local policies and provides a suitable Transport Implementation Strategy.

8 SUMMARY AND CONCLUSIONS

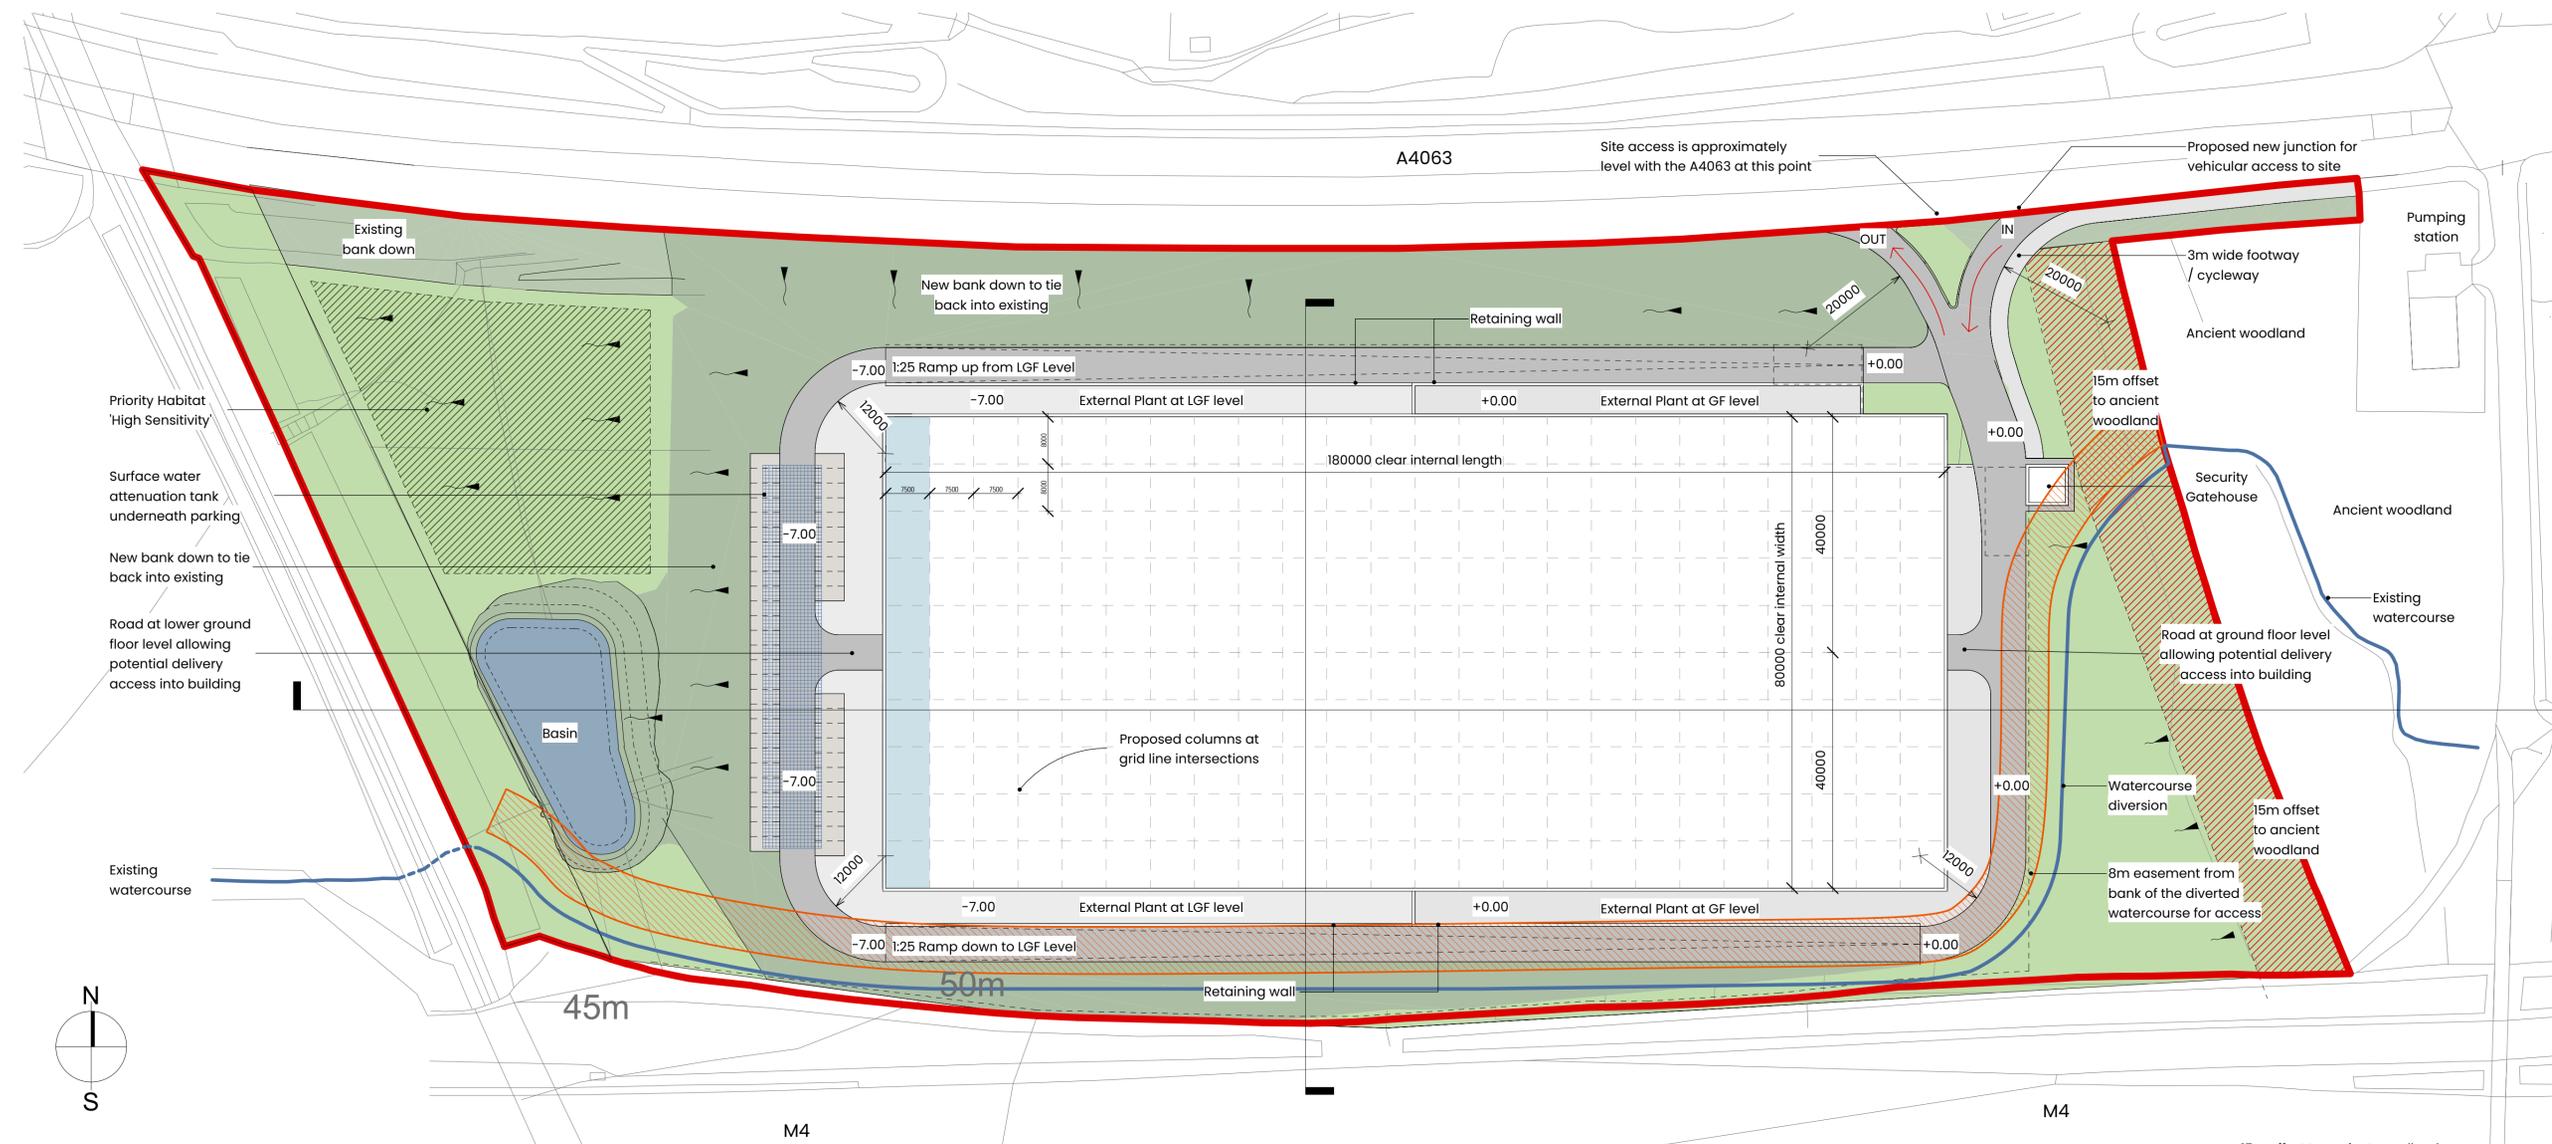

- 8.1 This Transport Assessment has been prepared by RPS on behalf of Cenin to support Pre-Application Consultation (PAC) for an outline planning application with all matters reserved for the construction of an employment unit (Use Class B1, B2 or B8), with indicative access and circulation, hard and soft landscaping and drainage infrastructure.
- 8.2 The site is located to the west of the Welcome Break Sarn Park Services and is bound by the A4063 to the north, the M4 to the south, an unnamed local access road which becomes a footbridge crossing over the M4 to the east, and a railway line (the Maesteg Line) to the west. Sarn is located further north of the site beyond the A4063.
- 8.3 Within the Bridgend County Borough Council (BCBC) Local Development Plan 2018-2033 the proposed site is allocated as a site for Employment Allocation (ENT1(15)) and (ENT2(29)). Appendix 5 of the Local Development Plan 2018-2033 is an Implementation and Delivery Appendix which sets out key issues, constraints, phasing and mitigation measures for allocated sites. In regard to ENT1(15) it is stated that there are “No known issues / constraints” in relation to Highways and Transport.
- 8.4 The scheme will include measures to promote sustainable modes of travel, providing walking and cycling links to the existing infrastructure.
- 8.5 A general outline of the development proposals has been provided. The transport issues for the development such as potential mitigation, and detailed access design will be in line with policy and will be determined at the reserved matters and detailed design stage of the application.
- 8.6 Trip generation for the network peak hour, calculated using the TRICS database, estimated that there may be 89 and 73 vehicle movements during the AM and PM network peak hours respectively.
- 8.7 An assessment of the impact of traffic generated by the development at the Bryncoch Road / A4063 signalised junction was completed using LinSig and has not identified any capacity related issues.
- 8.8 An assessment of a possible site access layout has shown that access could be provided without any capacity constraints.
- 8.9 The Transport Implementation Strategy for the development is considered to be appropriate with the proposals and compliant with the national and local policies set out by the Welsh Government and BCBC.
- 8.10 This Transport Assessment concludes that the proposed development would have suitable access arrangements that can be accommodated without the detriment to the existing highway safety or the operation of the local highway network. A Framework Travel Plan will be implemented which will promote sustainable travel to and from the development.
- 8.11 It is concluded that there are no transportation reasons why the development proposal should not be allowed.

Updated Existing Routes Maps

Integrated Network Map – Updated ERM Submission

Alongside its Integrated Network Map (INM) submission, the Council is also required to provide PDFs from the Welsh Government's Active Travel Mapping System for all settlements where additional existing routes are being proposed. A total of seven proposed ERM routes have been added to the system, and these are shown on the following maps contained within this booklet:

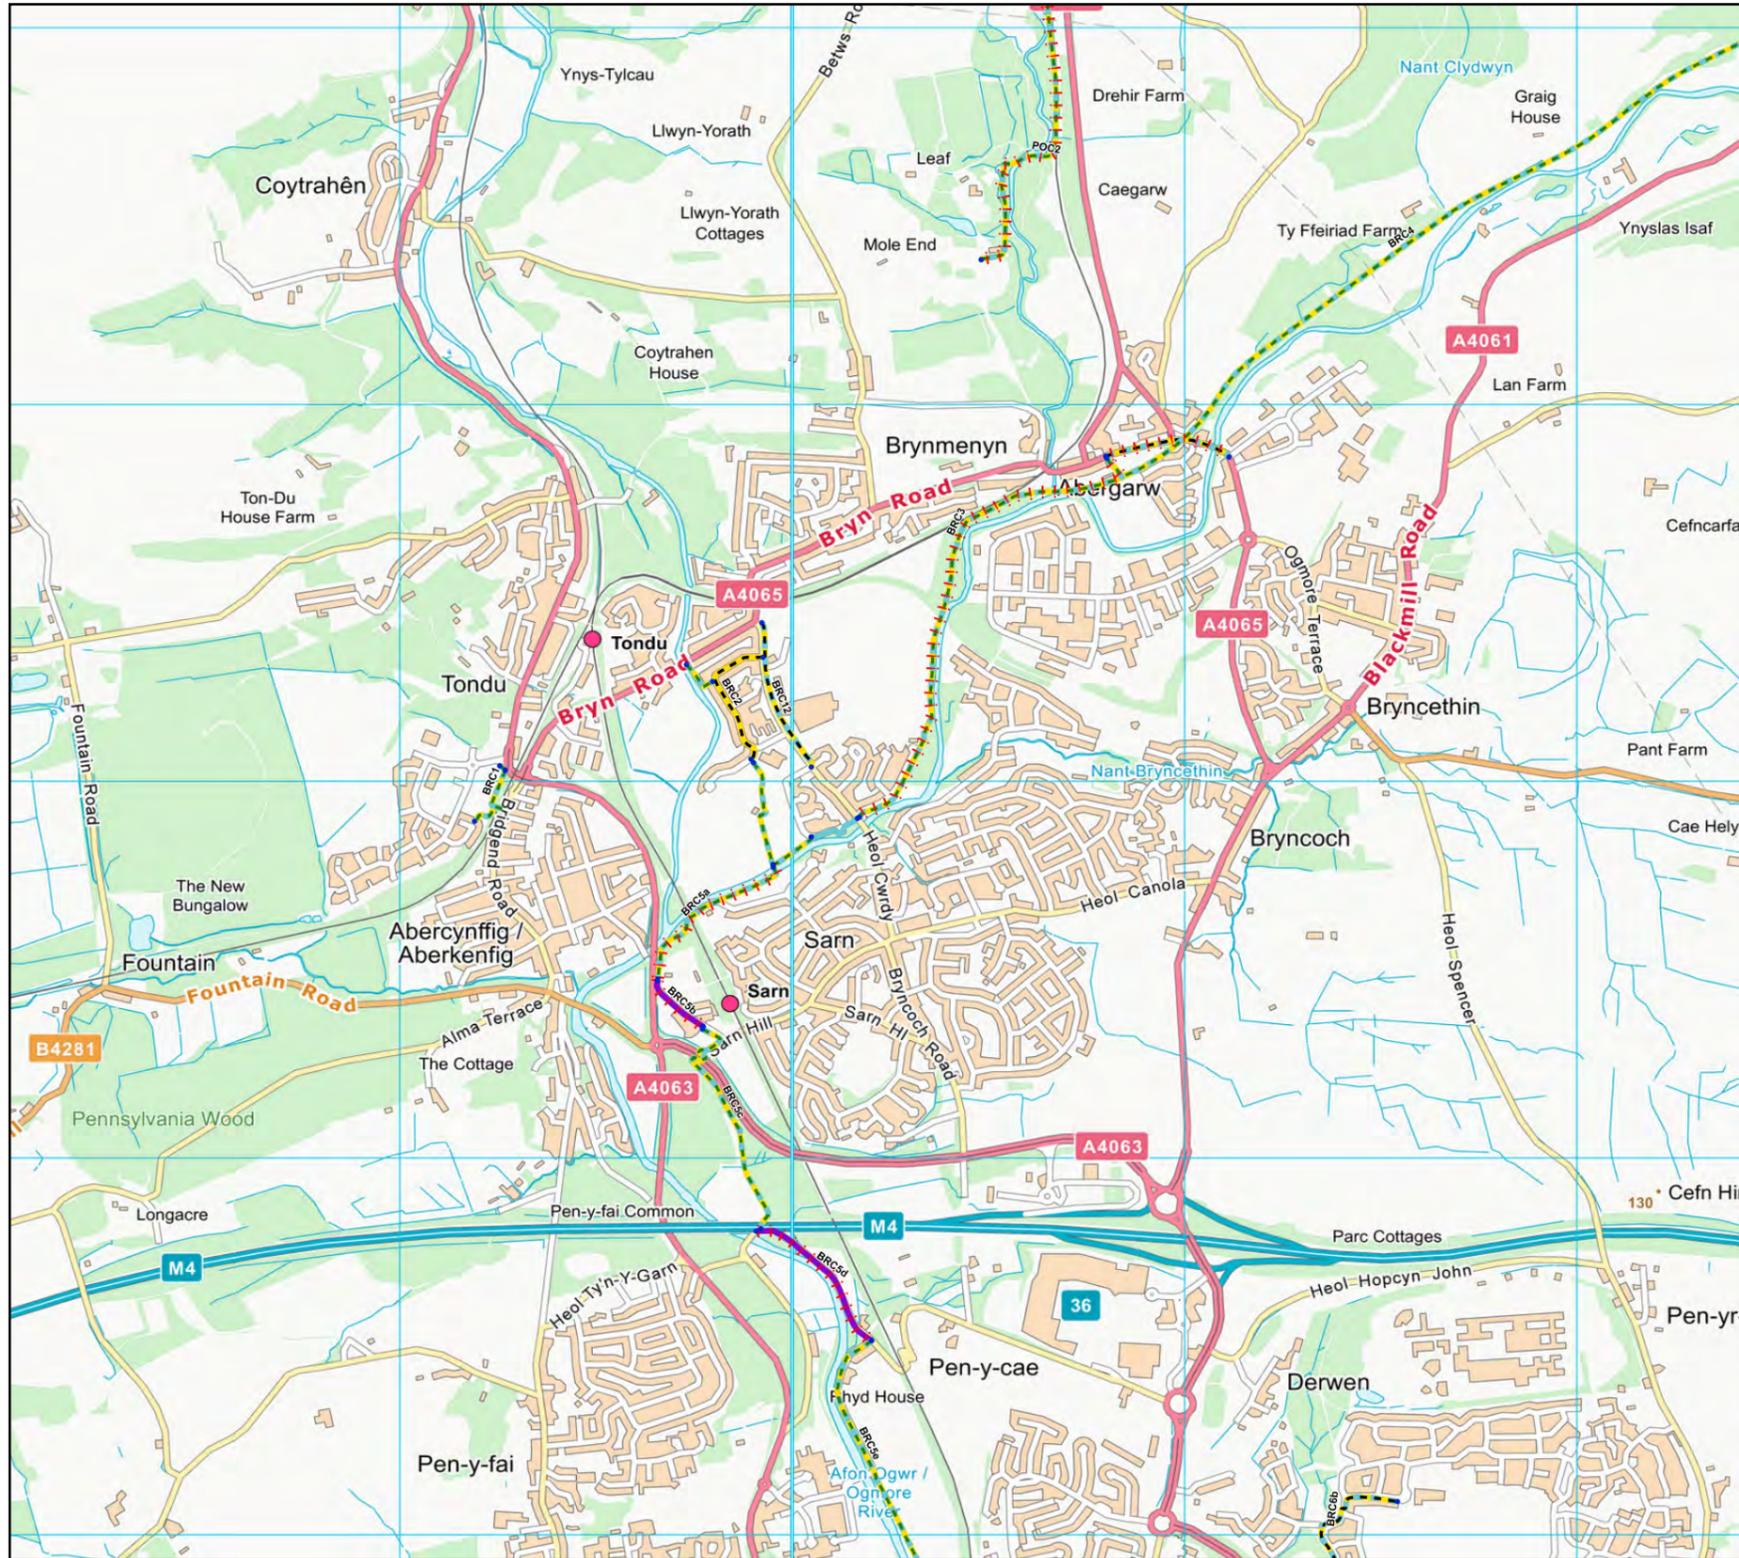

- Bridgend Active Travel Existing Routes Map – Pedestrian Map 1
- Bridgend Active Travel Existing Routes Map – Cycle Map 1
- Bridgend Active Travel Existing Routes Map – Pedestrian Map 2
- Bridgend Active Travel Existing Routes Map – Cycle Map 2
- Bridgend Active Travel Existing Routes Map – Pedestrian Map 3

Appendix J – Low Staff Site TRICS Report

RPS 1st Floor West London

Licence No: 705125

Calculation Reference: AUDIT-705125-250114-0141

TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 02 - EMPLOYMENT

Category : I - DATA CENTRE

TOTAL VEHICLES

Selected regions and areas:

02 SOUTH EAST

SO SLOUGH

4 days

This section displays the number of survey days per TRICS® sub-region in the selected set

RPS 1st Floor West London

Licence No: 705125

Primary Filtering selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: Gross floor area
Actual Range: 5677 to 16000 (units: sqm)
Range Selected by User: 5677 to 16000 (units: sqm)

Parking Spaces Range: All Surveys Included

Public Transport Provision:

Selection by: Include all surveys

Date Range: 01/01/16 to 24/05/23

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

Monday 1 days
Wednesday 3 days

This data displays the number of selected surveys by day of the week.

Selected survey types:

Manual count 4 days
Directional ATC Count 0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaken using machines.

Selected Locations:

Suburban Area (PPS6 Out of Centre) 4

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

Industrial Zone 4

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Inclusion of Servicing Vehicles Counts:

Servicing vehicles Included 5 days - Selected
Servicing vehicles Excluded X days - Selected

Secondary Filtering selection:

Use Class:

Not Known 4 days

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order (England) 2020 has been used for this purpose, which can be found within the Library module of TRICS@.

Filter by Site Operations Breakdown:

All Surveys Included

Population within 500m Range:

All Surveys Included

Secondary Filtering selection (Cont.):

Population within 1 mile:

25,001 to 50,000

4 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

250,001 to 500,000

4 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

0.6 to 1.0

4 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

No

4 days

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

No PTAL Present

4 days

This data displays the number of selected surveys with PTAL Ratings.

Total Rates:			0.724			0.717			1.441

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: $COUNT/TRP*FACT$. Trip rates are then rounded to 3 decimal places.

The survey data, graphs and all associated supporting information, contained within the TRICS Database are published by TRICS Consortium Limited ("the Company") and the Company claims copyright and database rights in this published work. The Company authorises those who possess a current TRICS licence to access the TRICS Database and copy the data contained within the TRICS Database for the licence holders' use only. Parameter summary

Trip rate parameter range selected:	5677 - 16000 (units: sqm)
Survey date range:	01/01/16 - 24/05/23
Number of weekdays (Monday-Friday):	5
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	0
Surveys manually removed from selection:	0

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are shown. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

Total Rates:			0.013			0.013			0.026

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: $COUNT/TRP*FACT$. Trip rates are then rounded to 3 decimal places.

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: $COUNT/TRP*FACT$. Trip rates are then rounded to 3 decimal places.

Total Rates:			0.027			0.028			0.055

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: $COUNT/TRP*FACT$. Trip rates are then rounded to 3 decimal places.

Total Rates:			0.147			0.153			0.300

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: $COUNT/TRP*FACT$. Trip rates are then rounded to 3 decimal places.

Total Rates:			0.013			0.013			0.026

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: $COUNT/TRP*FACT$. Trip rates are then rounded to 3 decimal places.

Appendix K – Typical Staff Site TRICS Report

This section displays the number of survey days per TRICS® sub-region in the selected set

RPS 1st Floor West London

Licence No: 705125

Primary Filtering selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: Gross floor area
Actual Range: 1138 to 27000 (units: sqm)
Range Selected by User: 552 to 30000 (units: sqm)

Parking Spaces Range: All Surveys Included

Public Transport Provision:

Selection by: Include all surveys

Date Range: 01/01/16 to 30/04/24

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

Monday	8 days
Tuesday	9 days
Wednesday	6 days
Thursday	7 days
Friday	12 days

This data displays the number of selected surveys by day of the week.

Selected survey types:

Manual count	42 days
Directional ATC Count	0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaken using machines.

Selected Locations:

Edge of Town Centre	2
Suburban Area (PPS6 Out of Centre)	8
Edge of Town	32

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

Industrial Zone	20
Development Zone	3
Residential Zone	7
No Sub Category	12

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Inclusion of Servicing Vehicles Counts:

Servicing vehicles Included	10 days - Selected
Servicing vehicles Excluded	37 days - Selected

Secondary Filtering selection:

Use Class:

n/a	1 days
Not Known	41 days

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order (England) 2020 has been used for this purpose, which can be found within the Library module of TRICS®.

Filter by Site Operations Breakdown:

All Surveys Included

Population within 500m Range:

All Surveys Included

Secondary Filtering selection (Cont.):

Population within 1 mile:

1,001 to 5,000	5 days
5,001 to 10,000	8 days
10,001 to 15,000	8 days
15,001 to 20,000	8 days
20,001 to 25,000	4 days
25,001 to 50,000	8 days
50,001 to 100,000	1 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

5,001 to 25,000	7 days
25,001 to 50,000	1 days
50,001 to 75,000	4 days
100,001 to 125,000	3 days
125,001 to 250,000	21 days
250,001 to 500,000	5 days
500,001 or More	1 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

0.6 to 1.0	21 days
1.1 to 1.5	17 days
1.6 to 2.0	4 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

No	42 days
----	---------

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

No PTAL Present	42 days
-----------------	---------

This data displays the number of selected surveys with PTAL Ratings.

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

The survey data, graphs and all associated supporting information, contained within the TRICS Database are published by TRICS Consortium Limited ("the Company") and the Company claims copyright and database rights in this published work. Parameter summary

Trip rate parameter range selected:	1138 - 27000 (units: sqm)
Survey date date range:	01/01/16 - 30/04/24
Number of weekdays (Monday-Friday):	42
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	2
Surveys manually removed from selection:	3

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

Total Rates:			0.005			0.008			0.013

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.

Total Rates:			1.333			1.325			2.658

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

TRIP RATE for Land Use 02 - EMPLOYMENT/D - INDUSTRIAL ESTATE
 MOTOR CYCLES

Classification Schemes

Scheme F Classification Scheme (Non-metric)

Scheme F is an attempt to implement the FHWA's visual classification scheme as an axle-based classification scheme. This is one of several interpretations.

Class	Vehicle Type	No. of Axles	Axle spacing in feet				
			Axle 1 to 2	Axle 2 to 3	Axle 3 to 4	Axle 4 to 5	Axle 5 to 6
1	motorcycle	2	<6.0				
2	passenger car	2	6.0 - 10.0				
	car + 1 axle trailer	3	<10.0	10.0 - 18.0			
	car + 2 axle trailer	4	<10.0		<3.5		
3	pickup	2	10.0 - 15.0				
	pickup + 1 axle trailer	3	10.0 - 15.0	10.0 - 18.0			
	pickup + 2 axle trailer	4	10.0 - 15.0		<3.5		
	pickup + 3 axle trailer	5	9.9 - 15.0			<3.5	
4	Traditional bus/coach	2	>20.0				
	Traditional bus/coach	3	>19.0				
5	single unit truck/bus - dual rear axle	2	14.9 - 20.0			<3.5	
6	3 axle truck	3		<18.0			
7	4 axle truck	4					
8	2S1	3		>18.0			
	2S2	4		>5.0	>3.5		
	3S1	4		<5.0	>10.0		
9	3S2	5		<6.1		3.5 - 8.0	
	5 axle combination	5					
10	6 axle combination	6			3.5 - 5.0		
	3S3	6					
11	2S1-2	5		>6.0			
12	3S1-2	6					>10.0
13	truck	7 or more

Summary of junction performance

	AM					PM				
	Set ID	Queue (Veh)	Delay (s)	RFC	LOS	Set ID	Queue (Veh)	Delay (s)	RFC	LOS
2028 - Baseline + Development										
Stream B-AC	D1	0.0	4.96	0.04	A	D2	0.1	5.75	0.09	A
Stream C-AB		0.0	0.00	0.00	A		0.0	0.00	0.00	A

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

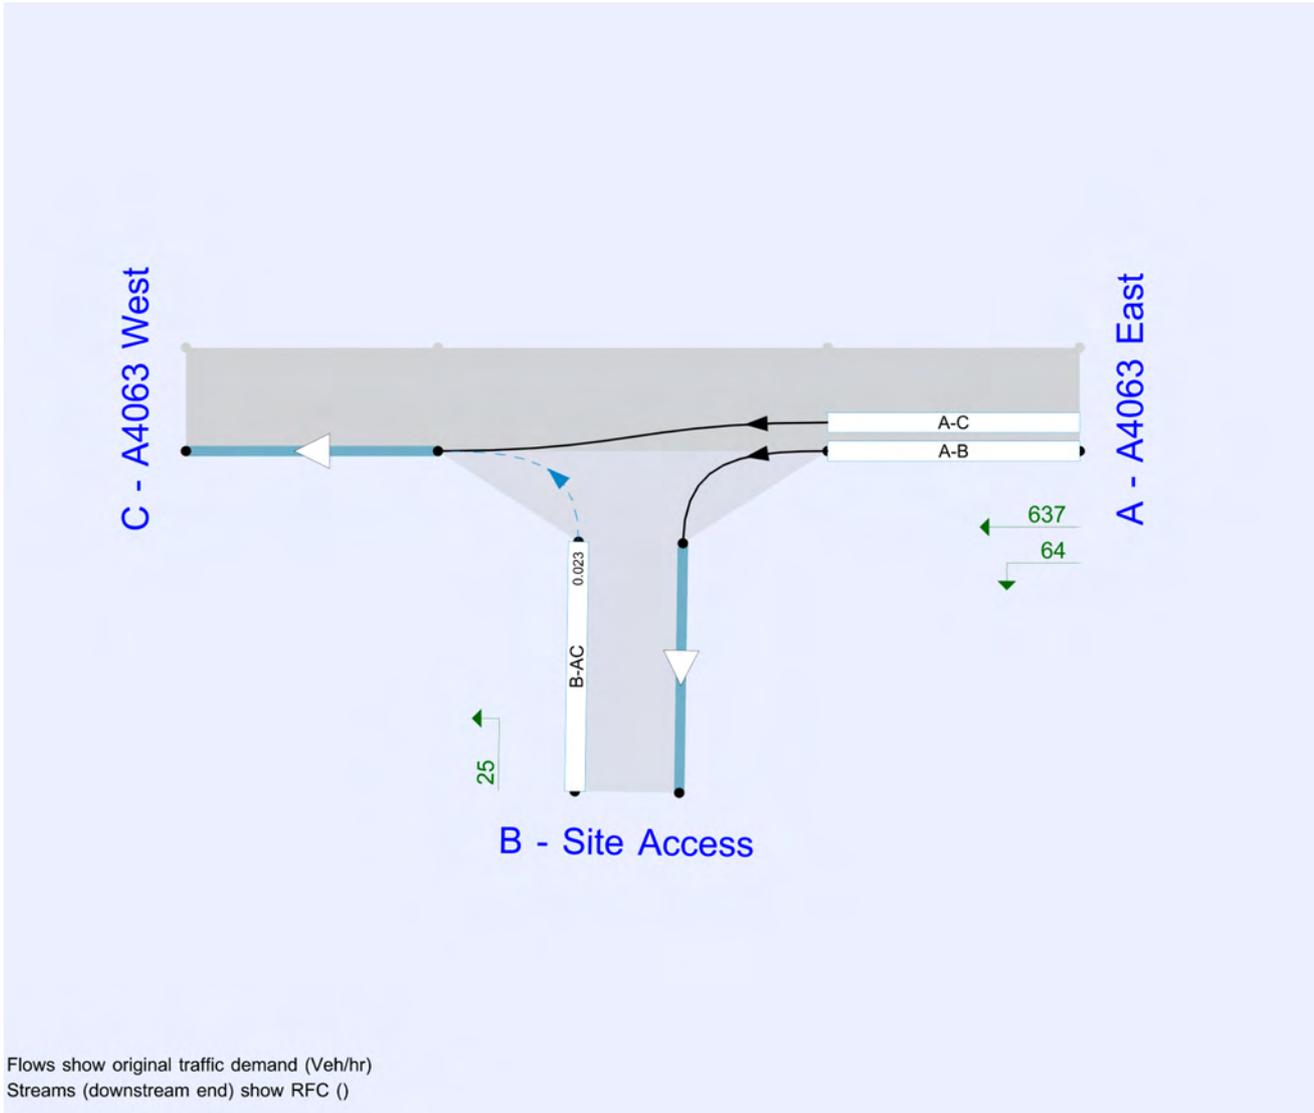

File summary

File Description

Title	
Location	
Site number	
Date	13/01/2025
Version	
Status	(new file)
Identifier	
Client	
Jobnumber	
Enumerator	TT\DANIEL.INNES
Description	

Units

Distance units	Speed units	Traffic units input	Traffic units results	Flow units	Average delay units	Total delay units	Rate of delay units
m	kph	Veh	Veh	perHour	s	-Min	perMin

The junction diagram reflects the last run of Junctions.

Analysis Options

Calculate Queue Percentiles	Calculate residual capacity	RFC Threshold	Average Delay threshold (s)	Queue threshold (PCU)
		0.85	36.00	20.00

Demand Set Summary

ID	Year	Scenario	Time period	Traffic profile type	Start time (HH:mm)	Finish time (HH:mm)	Time segment length (min)
D1	2028	Baseline + Development	AM	ONE HOUR	07:30	09:00	15
D2	2028	Baseline + Development	PM	ONE HOUR	16:15	17:45	15

Analysis Set Details

ID	Network flow scaling factor (%)
A1	100.000

2028 | Baseline + Development | AM

Data Errors and Warnings

No errors or warnings

Junction Network

Junctions

Junction	Name	Junction type	Arm A Direction	Arm B Direction	Arm C Direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	A4063 / Site Access	T-Junction	Entry Only	Two-way	Exit Only		0.16	A

Junction Network

Driving side	Lighting	Network delay (s)	Network LOS
Left	Normal/unknown	0.16	A

Arms

Arms

Arm	Name	Description	Arm type
A	A4063 East		Major
B	Site Access		Minor
C	A4063 West		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Width of kerbed central reserve (m)	Has right-turn storage	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C - A4063 West	7.10	✓	0.00			✓	

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Lane width (m)	Visibility to left (m)	Visibility to right (m)
B - Site Access	One lane	5.00	250	250

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Stream	Intercept (Veh/hr)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
B-A	837	0.145	0.367	0.231	0.524
B-C	938	0.092	0.234	-	-
C-B	574	0.177	0.177	-	-

The slopes and intercepts shown above include custom intercept adjustments only.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

Traffic Demand

Demand Set Details

ID	Year	Scenario	Time period	Traffic profile type	Start time (HH:mm)	Finish time (HH:mm)	Time segment length (min)
D1	2028	Baseline + Development	AM	ONE HOUR	07:30	09:00	15

Demand overview (Traffic)

Arm	Linked arm	Use O-D data	Average Demand (Veh/hr)	Scaling Factor (%)
A - A4063 East		✓	701	100.000
